

Teichmüller Theory and Applications

to Geometry, Topology, and Dynamics

Volume 1: Teichmüller Theory

(First Printing)

New errata posted September 25, 2013

We thank Samuel Roth for his contribution to this list.

Page 21 Exercise 1.8.11: Part 1 should read “Two nonidentity Möbius transformations commute if and only if they have the same fixed points, or are commuting involutions each interchanging the fixed points of the other.” (As the statement currently stands, $f(z) = -z$ and $g(z) = 1/z$ are a counterexample.)

Also, page 294, Proposition 6.12.4: in the second line of part 2, “a an open subset” should be “an open subset”.
